## Abstract

Three novel [diterpenoids](#) have been isolated from the roots of *Croton macrostachys*. The structure and stereochemistry of the compounds have been unambiguously settled as neoclerodan-5,10-en-19,6 ;20,12-diolide, 3 ,19-dihydroxytrachylobane, and 3 ,18,19-trihydroxytrachylobane from detailed spectroscopic evidence.
